EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a communication with Talivaldis Cepuritis (Reg. No. 20,818) on 02/17/10. The application has been amended as follows:

In the claims:

In claim 5, line 5; "D-1 and D-2" has been changed to --(D-1, D-2)--.

In claim 21, lines 3; "a common axis A" has been changed to --a common axis (A)--.

In claim 21, line 17, "D-1 and D-2" has been changed to --(D-1, D-2)--.

In claim 21, line 18, "D-1" has been changed to --(D-1)--.

In claim 21, line 19, "D-2" has been changed to --(D-2)--.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach that each gear train includes the compound gear, the geed spur gear, a command drive gear and a command feed gear of pitch diameter different from one another; and the clutch rotationally connecting the command drive gear and the command feed gear together so that the rotation speed of the compound spur gear is different than the rotation speed of the feed spur gear, in combination with other limitations set forth in claim 21.

Regarding claim 21, Lazarevic (6,065,212) teaches substantially the claimed invention in including a compound spur gear 16 and the feed spur gear 17 connected to a clutch. Lazarevic does not teach that the gears 16, 17 have spur gear tooth pitch diameters D-1 and D-2 in respective lengths extending through the axis and diametrically across the gears and with the length of the pitch diameter D-1 of said gear 17 being different from the length of the pitch diameter D-2 of the gear 16 for the rotation of the gear 17 at a rotation speed different from the rotation speed of the gear 16. However, Nanzai (5,881,616) teaches a powered pipe cutter including a main gear 7 and a cam mounting gear 8 stacked in parallel relationship similar to gears 16, 17 in Lazarevic. Nanzai also teaches that the gears 7, 8 have spur gear tooth pitch diameters in respective lengths extending through the axis and diametrically across the gears and with the length of the pitch diameter of said gear 7 being different from the length of the pitch diameter of the gear 8 for the rotation of the different from the rotation speed of the gear 7. It should be noted that gears 7 and 8 have different gear pitch diameters. See col. 3, lines 1-67 and col. 4, lines 1-32 in Nanzai. It would have been obvious to a person of ordinary skill in the art to provide Lazarevic's powered cutter with the different spur gear tooth pitch diameters for the spur gears, as taught by Nanzai, in order to prevent production of burrs on an inner side wall of a cut portion or on a cut face of the pipe.

However, Lazarevic in view of Nanzai does not teach that each gear train includes the compound gear, the feed spur gear, a command drive gear and a command feed gear of pitch diameter different from one another; and the clutch rotationally connecting the command drive gear and the command feed gear together so that the rotation speed of the

compound spur gear is different than the rotation speed of the feed spur gear, as set forth in claim 21.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
